

StorageReporter

prediction of
system limits

custom reports

system specific
views

StorageReporter

storage utalization
for all systems

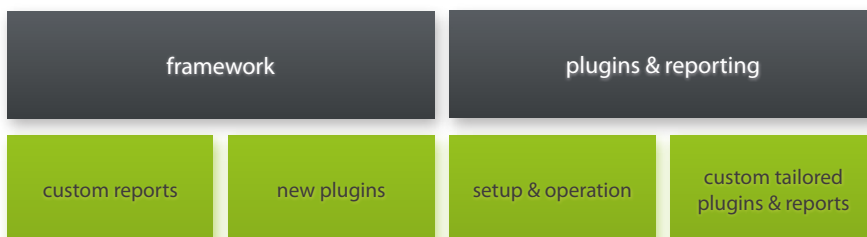

highlevel views

custom tagging
of all systems

Key benefits

- » get an overview of the storage utilization for all systems
- » see when systems reach their storage limits
- » use systemwide and system specific graphs and views including drill-down and export of data
- » assign tags to systems for your own classification
- » build custom reports to fit your special needs

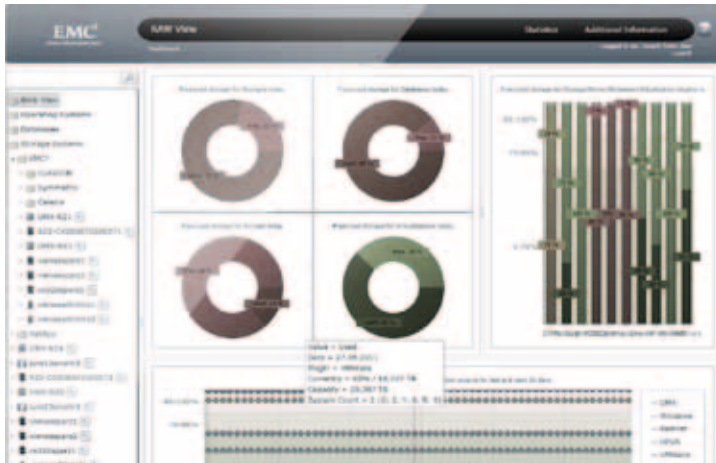

Modules & services

StorageReporter

Overview of storage utilization

Using StorageReporter you will get a central overview about your systems storage utilization from storage system up to the application. The integrated data aggregation and prediction feature allows you to plan for the increasing demand for storage space.

Flexible classification with tagging

The tagging feature allows you to classify your data and systems according to different criteria in order to build an effective basis for decision making. With this information you can make better informed decisions concerning upgrades, optimizations or charge back.

Custom reports

As all systems are connected it is possible to comprehend which applications and server using which storage systems and vice versa. The custom report feature can answer special questions tailored to your needs e.g.:

- » Migration of storage systems
- » Charge back to cost centers
- » Budgeting

All data in standard views and custom reports can be exported to common office formats for further processing.

Supported systems and applications

StorageReporter is able to collect and aggregate free, used, capacity and allocation values plus other properties from the following systems:

Virtualization

- » VMWare vCenter

Database management systems and other applications

- » MS SQL Server
- » Oracle database

Storage-systems

- » EMC Clariion
- » EMC Symmetrix
- » EMC Celerra
- » NetApp Data Ontap

Server operating systems and other volume manager

- » Windows
- » RedHat ES/AS
- » HP/UX
- » Other systems on request

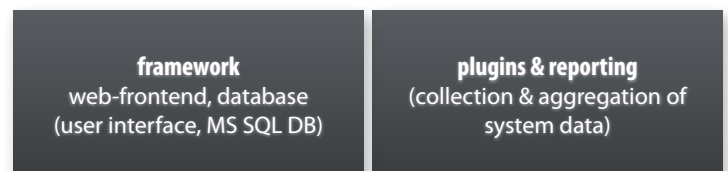

System requirements

Browser with Silverlight, Windows Server, MS SQL Server, agents with special requirements

Licencing & other services

StorageReporter is sold as product with software maintenance. New plugins supporting and custom reports can be delivered on demand. The service portfolio includes also setup and operations as well as support plans.

Modules

inkl. software maintenance ■
